

Melody

Designer	Neuland Industriedesign
Year	2012-2015

Melody is a versatile bookcase designed to meet a variety of furnishing needs. Its horizontal shelves provide generous storage space, ideal even for large objects. The dynamic design of the shelves adds a sense of movement to the space. Functionality and modularity, key elements in the work of Neuland Industriedesign, are at the core of Melody. Its single, vertically reversible module allows for both continuous and discontinuous configurations, enabling full-wall compositions. Available in a monochromatic version or with a contrasting back panel, Melody is designed for easy reconfiguration over time, adapting to changing needs and transforming each space in a unique way.
